

Holy Trinity Case Study – Supporting Photographs

Project Aims:

We wanted pupils to learn from one another and share knowledge of how each country uses water.

We wanted the children to gain a better understanding of where water comes from and how we can reduce the consumption of water in the UK.

Pupils were asked to discuss the ways in which we can conserve water at home and at school.

This was a shared project between both schools - Holy Trinity and Mkanakhoti. We decided to undertake this project as we felt it was important for pupils at both schools to understand the ways in which we can conserve water.

Pupils at Mkanakhoti raised concerns about the lack of hand washing facilities and the broken water pump. The children worked with the teachers to make new hand-washing facilities from the materials available to them.

We also had a special 'Water Day' whereby pupils spent the day exploring the usage and wastage of water. We had a guest speaker from Water Aid talk to the children about the conservation and supply of water around the world.
